Recover lost data safely and easily...

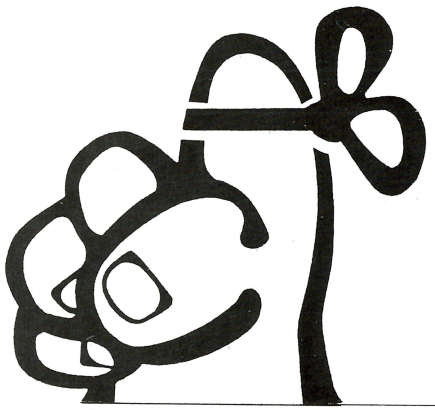
LifeSaver™

Have you ever had one of your Apple programs **cough** when you tried to read a disk? You're probably the victim of an unhappy situation that eventually hits every computer user.

It's called "Ouch!"

With **LifeSaver™**, you'll be able to recover that unreadable disk.

No other program we are aware of is able to recover those lost bytes as **quickly** and **safely** as LifeSaver!



LifeSaver **never** writes on your original disk. First, it creates a new disk, then attempts to recreate as much of your data as possible. When damaged data is found, it uses adjacent markers as clues to the reconstruction.

A progress report is displayed on your screen so you can see the extent of your problem and exactly how much data will be retrieved.

Even if you've never had data loss, some day you will.

Be prepared with LifeSaver...available **ONLY from Follett Software!**
